

Android Mail – Configuration

Open the Mail app on your Android smartphone.

If this is the first email account you set up on your phone, you will see the screen below. If there is already another account, you will need to go to the menu and add a new account.

In this step enter the email address you want to set up and the associated password.
(You can find the password in your easyname Controlpanel in [My Hosting] > [Email boxes] alongside the e-mail box which is linked to the mail address you want to set up. If you are not sure which mailbox to use, please refer to [My Hosting] > [Email addresses])

When finished, touch 'Manual setup'.

Account Type

You can now choose whether you want to use POP or IMAP.

When using IMAP, your e-mails remain on the server after downloading them (beware of overfilled e-mail boxes). Also when using IMAP if you create a folder in one mail client or even webmail, those folders are available exactly like this on all other mail clients that have this e-mail account configured.

When using POP, e-mails are downloaded from the server and then deleted by default.

Exchange/ActiveSync is not available for easyname.

Touch 'POP3' or 'IMAP' to continue.

Incoming Settings

Change 'Username' to the name of your e-mail box which is associated to your e-mail address. The password in this mask is entered correctly already.

Please enter 'imap.easyname.com' as your 'IMAP server'.

If you chose POP3 in the proceeding step this field will have the name 'POP server'. In this case please enter 'pop.easyname.com'.

Finally please change 'Security type' to 'SSL/TLS'. 'Port' will change automatically depending on the chosen server type and security type.

Touch 'Next' when you are done.

The screenshot displays the 'Incoming settings' configuration screen. At the top, there is a status bar with icons for signal, Wi-Fi, battery (90%), and time (10:33). Below the title 'Incoming settings' (with an envelope icon), the following fields are visible:

- Username:** 8342mail3
- Password:** Masked with 10 dots.
- IMAP server:** imap.easyname.com (highlighted with a blue border)
- Port:** 993
- Security type:** SSL/TLS (selected in a dropdown menu)
- IMAP path prefix:** Optional

At the bottom of the form, there are two buttons: 'Previous' and 'Next'. Below these buttons is a standard Android navigation bar with icons for back, home, and recent apps.

Outgoing Settings

As 'SMTP server' please enter 'smtp.easyname.com'.

Change the 'Security type' to 'SSL/TLS', the port changes here automatically as well. 'Username' and 'Password' are too correct already.

Touch „Next“.

The screenshot displays the 'Outgoing settings' configuration screen. At the top, the status bar shows the time as 10:33, 90% battery, and various connectivity icons. The title bar features an envelope icon and the text 'Outgoing settings'. Below this, the 'SMTP server' field is highlighted with a blue border and contains the text 'smtp.easyname.com'. The 'Port' field contains '465'. The 'Security type' dropdown menu is set to 'SSL/TLS'. A 'Require sign-in' checkbox is checked. The 'Username' field contains '8342mail3' and the 'Password' field is masked with ten dots. At the bottom of the settings area, there are two buttons: 'Previous' and 'Next'. The very bottom of the screen shows the standard Android navigation bar with back, home, and recent apps icons.

Synchronisation Settings

This step is only available if you chose 'IMAP' as account type. If you have chosen 'POP3' this step can be skipped.

We recommend to set 'Days to sync' to 'All', though you can choose all settings in this step as you personally like.

To continue, please touch 'Next'.

Account Name and Sender's Name

You can now choose an account name to your liking in 'Set account name (optional)'.

For 'Your name (on outgoing messages)' you can enter a sender's name which will be seen by recipients of your e-mails.

Normally you would want to provide your full name and/or a company name.

After you have confirmed by touching 'Next' your mobile phone is correctly set up for sending and receiving your easyname e-mails!
