Your professional domain and hosting partner

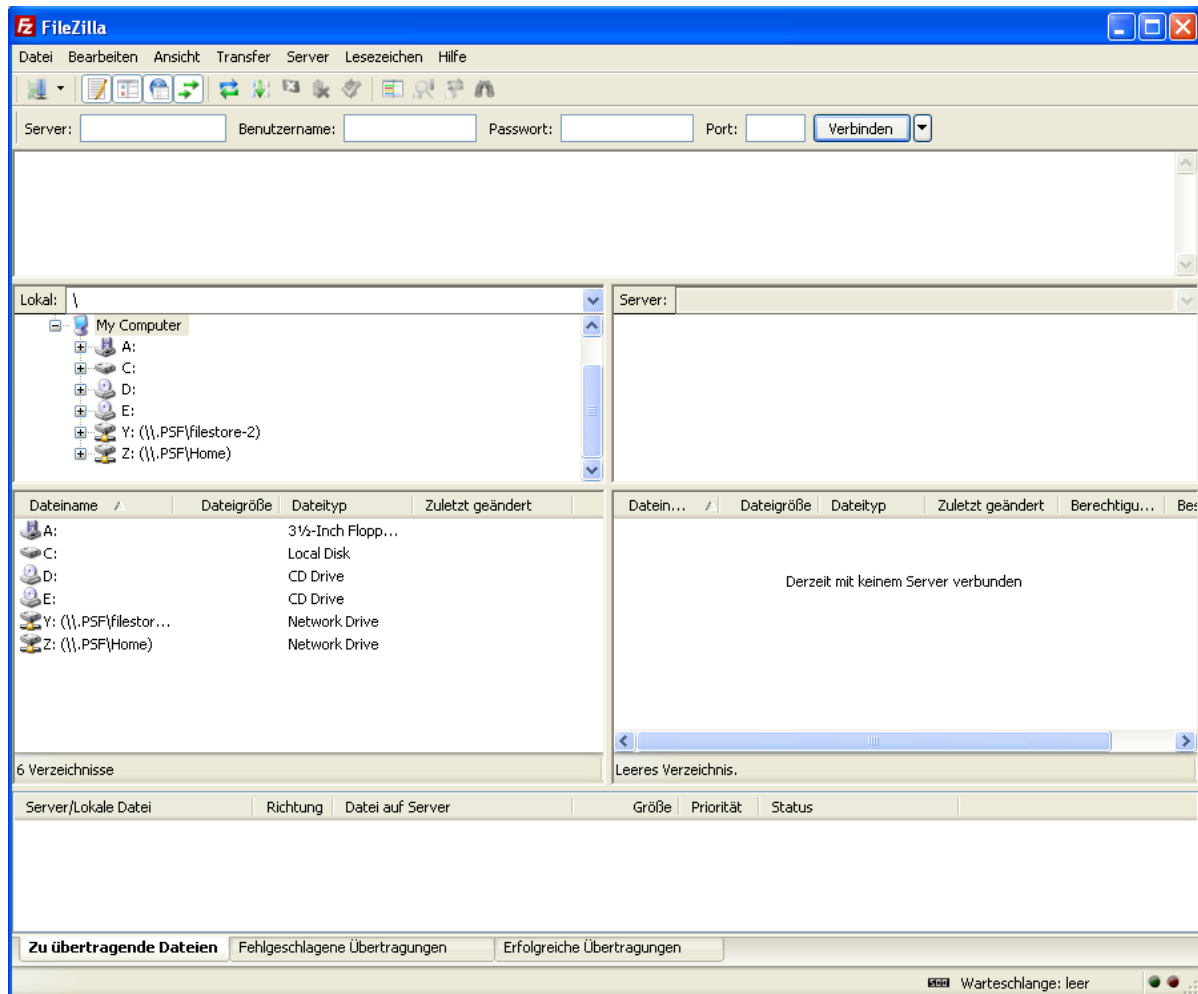

Manual

FileZilla

Download the latest version of FileZilla to your computer - use the following link to download the latest version: <https://filezilla-project.org/>
After downloading, install FileZilla to your computer.

By starting FileZilla, the following window opens:

On the left side of the program-screen you see the directory structure of your computer. In the right column you will find the directory structure of your web host, after connecting to the easyname webserver.

In the top bar, you have to specify the data of the easyname webserver. For the required data see below:

Log into the easyname controlpanel <http://my.easyname.eu> and click on „My Hosting“ > „Datasheet“

The screenshot shows the easyname control panel interface. The header includes the logo 'easyname' and the tagline 'Ihr Echtzeit Controlpanel.' The user is logged in as 'Sonja'. The main content area is titled 'Datenblatt' and is divided into three sections: 'Hostnamen', 'FTP Zugänge', and 'E-Mail Postfächer'. Each section contains a table with relevant data.

Hostnamen

Beschreibung	Hostname
FTP Host	e17448-ftp.services.easyname.eu
Webmail Zugang:	https://webmail.easyname.eu

FTP Zugänge

Benutzername	Passwort	Kommentar	Optionen
10900ftp1	XXXXXXXXXX		

[FTP Zugänge konfigurieren](#)

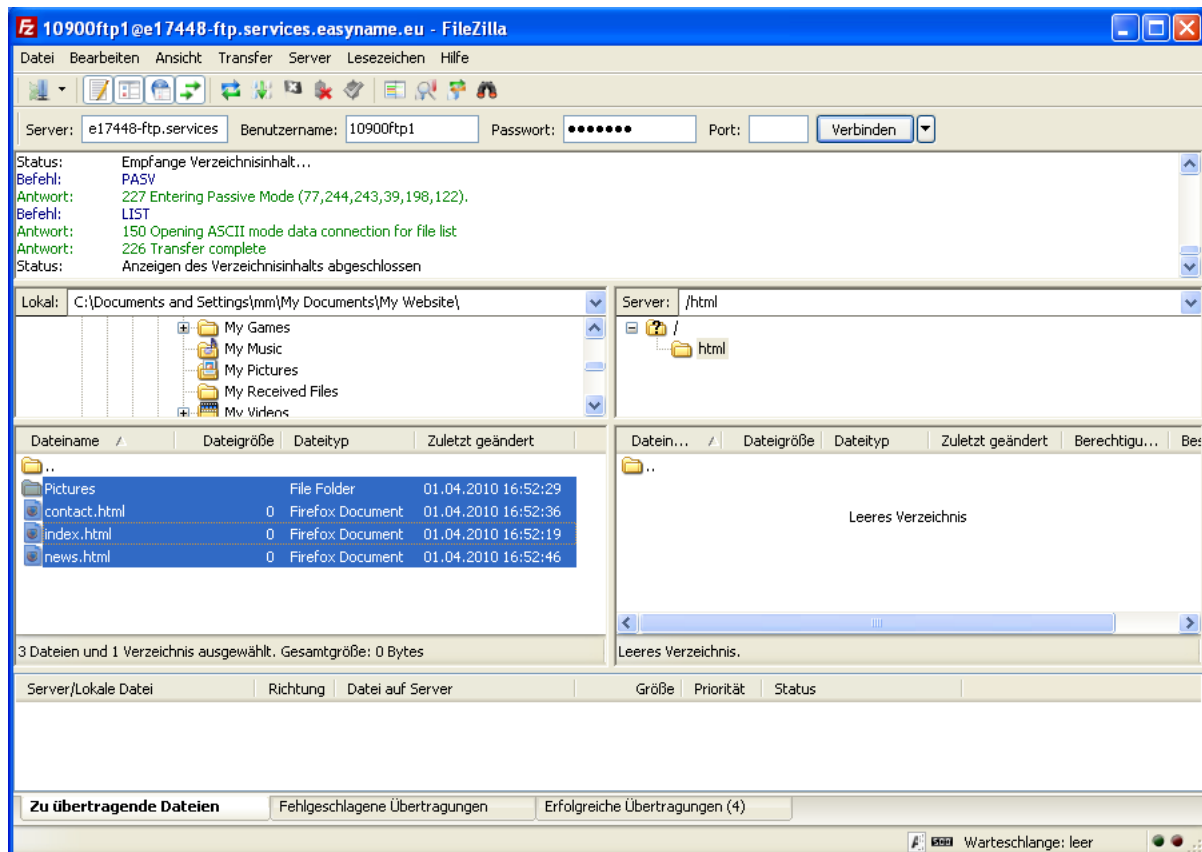

E-Mail Postfächer

Box/User	Passwort	Kommentar	Optionen
10900mail1	XXXXXXXXXX		

[E-Mail Postfächer konfigurieren](#)

Here you will find all necessary information to connect with your Webhost. The relevant data for you are: FTP Host, Username and Password of the FTP Server.

Now enter the login information into the top bar (see picture below) and then click on Connect. The field "Port" should be empty.

On the left column you have to navigate through the directory structure of your computer to your web pages. Then select the entire contents of web pages and drag them to the right side (into the "html" folder). After this action the selected files will be transferred to your webhost on easyname.

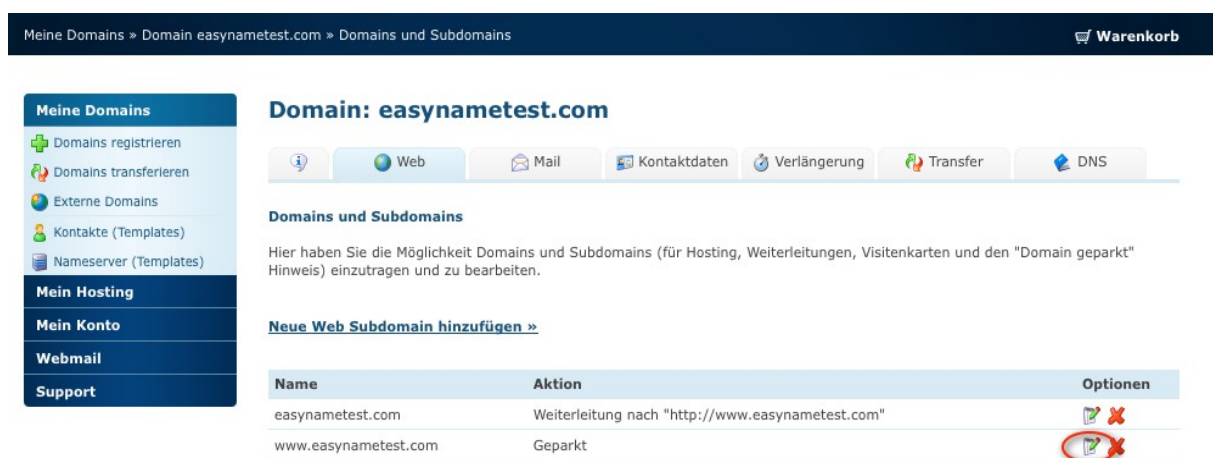

Once all data has been copied, you can close FileZilla.

Please notice that the starting/first page of your homepage needs to be named index.html, index.htm or index.php

Finally, you have to configure your Subdomain-settings.

Log into the easynome controlpanel again <http://my.easynome.eu> and click on [My domains] -> [Manage] (choose desired domain) -> [Web]. Now you should see the Subdomain options for your domain.

Click on the "Edit" icon (see picture) in the row of your domain. If there is no entry for your domain click on "Add new Subdomain" and type "www." into the textfield.

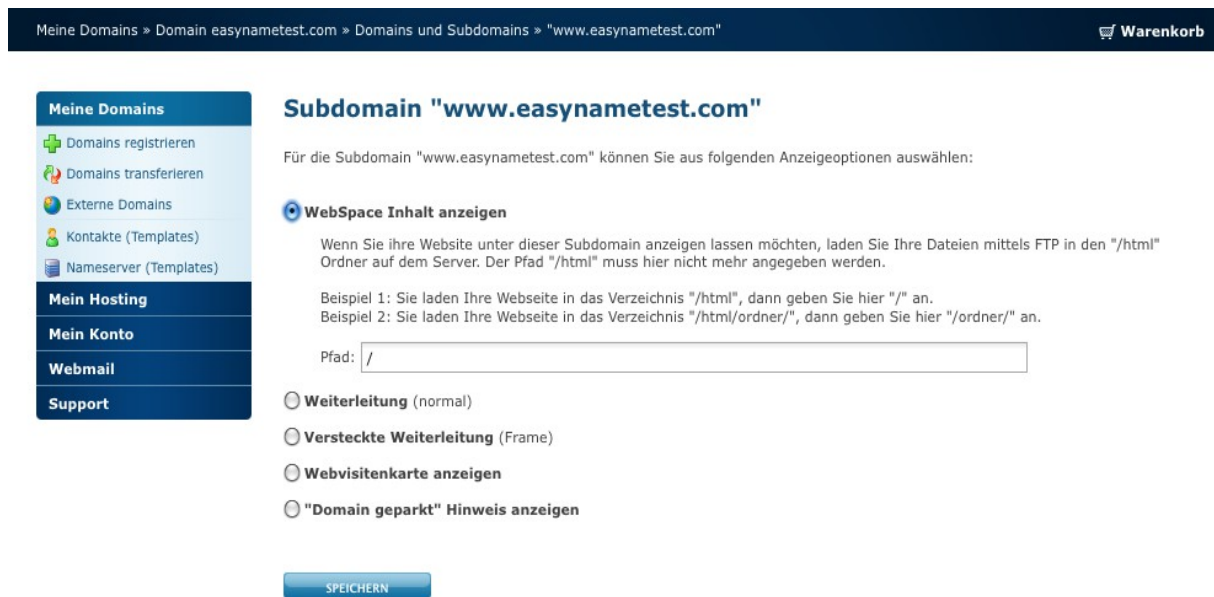

The screenshot shows the control panel for the domain easynametest.com. The breadcrumb trail is "Meine Domains » Domain easynametest.com » Domains und Subdomains". The main heading is "Domain: easynametest.com". Below this are tabs for "Web", "Mail", "Kontakt Daten", "Verlängerung", "Transfer", and "DNS". The "Web" tab is active, showing "Domains und Subdomains". A message states: "Hier haben Sie die Möglichkeit Domains und Subdomains (für Hosting, Weiterleitungen, Visitenkarten und den 'Domain geparkt' Hinweis) einzutragen und zu bearbeiten." Below this is a link "Neue Web Subdomain hinzufügen »". A table lists the subdomains:

Name	Aktion	Optionen
easynametest.com	Weiterleitung nach "http://www.easynametest.com"	 
www.easynametest.com	Geparkt	 

The "edit" icon for the "www.easynametest.com" row is circled in red.

In the last step select "Show webspace content" and enter in the path field only one a slash (see picture below) before clicking "Save.". Now the webserver knows that the webcontent of the html folder have to be published.

The screenshot shows the FileZilla control panel interface. At the top, a breadcrumb trail reads: "Meine Domains » Domain easynametest.com » Domains und Subdomains » 'www.easynametest.com'". A shopping cart icon labeled "Warenkorb" is in the top right. On the left, a sidebar menu contains: "Meine Domains" (with sub-items: Domains registrieren, Domains transferieren, Externe Domains, Kontakte (Templates), Nameserver (Templates)), "Mein Hosting", "Mein Konto", "Webmail", and "Support". The main content area is titled "Subdomain 'www.easynametest.com'". Below the title, it says: "Für die Subdomain 'www.easynametest.com' können Sie aus folgenden Anzeigeeoptionen auswählen:". The "WebSpace Inhalt anzeigen" option is selected with a radio button. Below this, there is explanatory text: "Wenn Sie ihre Website unter dieser Subdomain anzeigen lassen möchten, laden Sie Ihre Dateien mittels FTP in den '/html' Ordner auf dem Server. Der Pfad '/html' muss hier nicht mehr angegeben werden." Two examples are provided: "Beispiel 1: Sie laden Ihre Webseite in das Verzeichnis '/html', dann geben Sie hier '/' an." and "Beispiel 2: Sie laden Ihre Webseite in das Verzeichnis '/html/ordner/', dann geben Sie hier '/ordner/' an." Below the text is a text input field labeled "Pfad:" containing a single forward slash "/". At the bottom, there are four radio button options: "Weiterleitung (normal)", "Versteckte Weiterleitung (Frame)", "Webvisitenkarte anzeigen", and "Domain geparkt" Hinweis anzeigen". A blue "SPEICHERN" button is at the bottom center.

In a few minutes your webpage should be reachable by typing your domainname into the browser. In this example it would be <http://www.easynametest.com>
